PROFILE

I have always been interested in knowing the internal functioning of systems, getting to the bottom of it by asking myself: "how?" and "why?" a system works.

Since I was a child I ventured into software development creating my first video game at the age of 13 using Game Maker, a game that was published on Google Play.

Then I realized that the thing that i am really passionate about is developing solutions to problems that people may present in their daily basis. So I dedicated myself to the development of mobile applications and computer systems that fulfill specific tasks and brighten people's days by solving problems and helping them.

I have also carried out public and private projects for companies that require WordPress web services, plugins and AWS automatons.

As a "Técnico Superior en Informática", I decided to create a youtube channel where I make videos for the Hispanic and Anglo-Saxon community to teach aspects of programming fundamentals, among other things.
